Installation Of A New Plug N’ Click Heater

- Turn off power to the system.
- Using a Phillips screwdriver remove the 2 screws on top of the enclosure and open the cover.

- Locate the 2 sensors holder on the circuit board.
- Remove the 2 heater sensors by depressing the clip and gently pulling on the wire to remove each sensor cable.

- Unplug the heater power connector by depressing the holder clip to release the female connector.
- Remove the 2 heater nuts with a 3/8” (9.5mm) open wrench.
- Remove heater from system.

PARTS AND TOOLS YOU NEED
- 3/8” (9.5mm) open end wrench
- 3/8” (9.5mm) nut driver
- Flat-head and Phillips screwdriver
- Replacement Balboa Heater
- Nyogel 760G (36308) and a stick

WARNING!
Please contact an electrician or your local electrical company when connecting any spa electrical components. DO NOT OPEN THE SPA SYSTEM AND ATTEMPT TO CONNECT THE CABLE CONNECTORS YOURSELF. The high electrical voltage will harm or kill you.
**STEP 5 INSTALL HEATER CABLES, NUTS AND SENSORS**

- Place your new heater in the system rack.
- Tighten the 2 nuts to secure the heater in place.
- Reinsert your 2 sensors.

**STEP 6 APPLY NYOGEL 760G TO THE HEATER POWER MALE TERMINAL**

- Use a flat stick apply NYOGEL 760G to all 3 sides of the heater power male terminal.

**STEP 6 REINSERT THE POWER TERMINAL**

- Reinsert the heater power plug. When you hear a CLICK, this means the power plug is inserted correctly and locked in place.
- Reinsert the spa cover and tighten the 2 screws.
- Turn on power to the system and ENJOY!
