The Whirlpool Bath Pulsating Bath Pillow

A Welcome Addition to Your Whirlpool Bathtub

The Neck Masseur™ Bath Pillow operates by diverting water from the whirlpool jet system with a variable speed side to side pulsating stream of water to massage areas of the neck for a complete massage. The soft urethane pillow has a special diffuser screen that minimizes splashing and enhances hydrotherapy to the neck area.

ADD-ON SYSTEM (MODEL NJ1)

The Controller turns pillow jets on via on-off button. Jets alternate back and forth. The speed of the alternating action can be increased or decreased (three speeds) by the plus– minus buttons on the keypad. The pump must be on to activate the pillow features.

PUMP AND PILLOW CONTROL (MODEL NJ2)

Same features as the add-on system, but with an integrated pump control and 20 min. run timer. The Controller turns on the pillow jets via on-off button. Jets alternate back and forth. The speed of the alternating action can be increased or decreased (three speeds) by the plus– minus buttons on the keypad.

PUMP, PILLOW AND WATER LEVEL CONTROL (MODEL NJ3)

Same features as NJ2 but with an integrated pump control and 20 min. run timer and water level control. The Controller turns on pillow jets via on-off button. Jets alternate back and forth. The speed of the alternating action can be increased or decreased (three speeds) by the plus– minus buttons on the keypad.
